MongoDB Builder Day Dublin
3 October 2026

Student rental scams

Ireland, January to July 2026

230+

reported rental and
reservation scams

€400k+

reported losses
before peak season

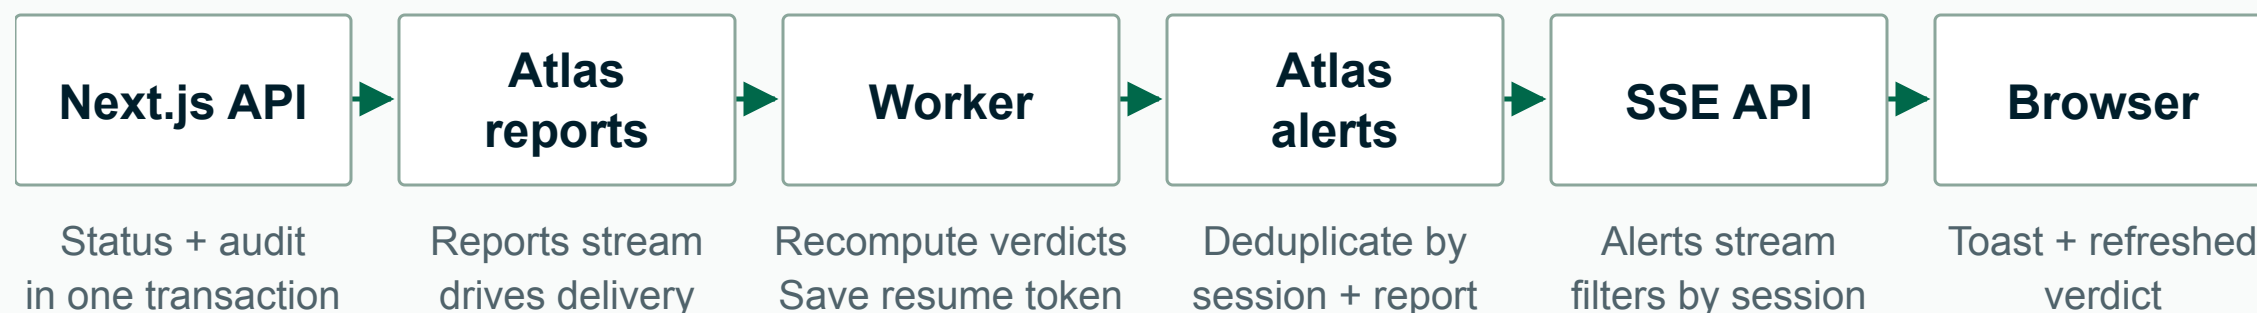

The seasonal peak runs from August to October.

Shared listing evidence gives students another reason to pause before paying.

MongoDB is the event bus

One Next.js app and one worker share an Atlas database.

Moderator confirms

Checks use indexed ring traversal, photo hashes and vector search.

Both Atlas boxes are collections in the same database.

Hashed contact identifiers connect reports without storing raw contacts.

Unique alert keys support retries. Worker tokens support restart recovery.

Polling and inline fan-out provide demo fallbacks.

The team behind ScamRing

Four lanes, one shared data contract.

Core	Adam [surname]	Database, ingestion and verdict API
Data	[B name]	Rent references, seed rings and signals
Frontend	[C name]	Check experience, evidence and ring view
Realtime	[D name]	Moderation, alerts and release checks

Next: student-union moderators and messaging intake.
